From the time Dr. Mark Goldstein was a little boy—even before he had his first dog—he was fascinated by creatures both domestic and wild. After graduating veterinary school at Cornell University, he became a veterinarian in clinical practice, then director of zoos in Boston and Los Angeles, then head of a progressive humane society where he advocated for animal welfare. During his extraordinary 30-year career, Dr. Mark has accrued a lifetime of experiences working with all sorts of animals and the people who care for them. Dr. Mark's life with animals taught him more than how to be a great doctor, it taught him how to live life. The stories in this book reflect those lessons; they will make you laugh and cry as they entertain and amaze you. Each real-life experience sheds light on the challenges and hard work of the talented individuals who work in the world of animal welfare. These are stories that illustrate the tremendous impact animals have on our daily lives—they are hallmarks of the sacred importance of the human-animal bond. On your journey through the exhilarating life of Dr. Mark, you'll meet some of the finned, furred, and feathered animals who offered him invaluable insights—Harold the hamster, Sasha the Siberian tiger, St. Francis the German Shepherd, Ralph the buffalo, Gus the stallion, Frank the goldfish, and many more fascinating creatures!

This guide by the author of *Merle’s Door* is “beneficial for anyone who wants to ensure that their dogs will be healthy and well” (Seattle Post-Intelligencer). From the bestselling author who offers “the most utterly compelling translation of dog to human I have ever seen” (Jeffrey Masson), this is a joyful chronicle of a dog and a groundbreaking answer to the question: How can we give our dogs the happiest, healthiest lives? When Ted Kerasote was ready for a new dog after losing his beloved Merle—who died too soon, as all our dogs do—he knew he wanted to give his puppy Pukka the longest life possible. But how to do that? So much has changed in the way we feed, vaccinate, train, and live with our dogs from even a decade ago. In an adventure that echoes *The Omnivore’s Dilemma* with a canine spin, *Kerasote* tackles these subjects, questioning our conventional wisdom and emerging with vital new information that will surprise even the most knowledgeable dog lovers. Can a purebred be as healthy as a mixed breed? How many vaccines are too many? Should we rethink spaying and neutering? Is raw food really healthier than kibble, and should your dog be chewing more bones? Traveling the world and interviewing breeders, veterinarians, and leaders of the animal-welfare movement, Kerasote pulls together the latest research to help us rethink the everyday choices we make for our companions. And as he did in *Merle’s Door*, *Kerasote* interweaves fascinating science with the charming stories of raising Pukka among his dog friends in their small Wyoming village. Funny, revelatory, and full of the delights of falling in love with a dog, Pukka’s Promise will help redefine the potential of our animal partners.

Learn to communicate with your dog—using their language “Good reading for dog lovers and an immensely useful manual for dog owners.”—The Washington Post An Applied Animal Behaviorist and dog trainer with more than twenty years’ experience, Dr. Patricia McConnell reveals a revolutionary new perspective on our relationship with dogs—sharing insights on how “man’s best friend” might interpret our behavior, as well as essential advice on how to interact with our four-legged friends in ways that bring out the best in them. After all, humans and dogs are two entirely different species, each shaped by its individual evolutionary heritage. Quite simply, humans are primates and dogs are canids (as are wolves, coyotes, and foxes). Since we each speak a different native tongue, a lot gets lost in the translation. This marvelous guide demonstrates how even the slightest changes in our voices and in the ways we stand can help dogs understand what we want. Inside you will discover:

- How you can get your dog to come when called by acting less like a primate and more like a dog
- Why the advice to “get dominance” over your dog can cause problems
- Why “rough and tumble primate play” can lead to trouble—and how to play with your dog in ways that are fun and keep him out of mischief
- How dogs and humans share personality types—and why most dogs want to live with benevolent leaders rather than “alpha wanna-bes!”

Fascinating, insightful, and compelling, *The Other End of the Leash* is a book that strives to help you connect with your dog in a completely new way—so as to enrich that most rewarding of relationships.

From Alexandra Horowitz, #1 New York Times bestselling author of *Inside of a Dog*, an eye-opening, informative, and wholly entertaining examination and celebration of the human-canine relationship for the curious dog owner and science-lover alike. We keep dogs and are kept by them. We love dogs and (we assume) we are loved by them. We buy them sweaters, toys, shoes; we are concerned with their social lives, their food, and their health. The story of humans and dogs is thousands of years old but is far from understood. In *Our Dogs, Ourselves*, Alexandra Horowitz explores all aspects of this unique and complex interspecies pairing. As Horowitz considers the current culture of dogdom, she reveals the odd, surprising, and contradictory ways we live with dogs. We celebrate their individuality but breed them for sameness. Despite our deep emotional relationships with dogs, legally they are property to be bought, sold, abandoned, or euthanized as we wish. Even the way we speak to our dogs is at once perplexing and delightful. In thirteen thoughtful and charming chapters, *Our Dogs, Ourselves* affirms our profound affection for this most charismatic of animals—and opens our eyes to the companions at our sides as never before.
