This book focuses on efficient visualization techniques, which are the prerequisite for the interactive exploration on cluster computers with several GPUs, adaptive rendering methods, multi-resolution models, and non-photorealistic for the interactive exploration of complex data sets. High performance is primarily achieved by devising algorithms for the fast graphics hardware. Other aspects discussed in the book include parallelization on cluster computers with several GPUs, adaptive rendering methods, multi-resolution models, and non-photorealistic for the interactive exploration of complex data sets. Gomputer-generated imagery (CGI) is the application of computer graphics to create or contribute to images in art, printed media, videos, and simulators. The images may be two-dimensional (2D), although the term "CGI" is most commonly used to refer to the 3-D computer graphics used for creating ...
